

NON-ADJUSTABLE SECOND STAGE REGULATOR ANDROMEDA **SOPRASTEK**

This model is downstream demand valve second stage regulators that are lighter and smaller than most other primary second stages. They provide breathing gas as you demand it with low inhalation resistance. Breathing effort is factory set to the average performance level required by most divers.

They are provided with front-mounted purge buttons and orthodontically designed mouthpieces. They can be used as primary second stages or as on octopus.

NOTE: If this second stages is shipped from the factory specifically as an Octopus, the inhalation effort is set slightly higher to reduce sensitivity.

NON - ADJ 2ND REGULATOR PART LIST			
NO	ITEM NO	DESCRIPTION	Q' TY
